

Keywords index

Alloys	629	Microstructural evolution	613
Anodic polarisation	609	Microstructure	601, 605
		Mössbauer spectroscopy CEMS	633
Carbides	633	Nanomaterials	597, 605, 609
Cemented carbides	617	Nickel superalloys	629
Ceramic preforms	593	Phases	625
Composites	593	Powder metallurgy	613, 617
Copper	609	Pre-tempering	581
Cutting ability test	621	Properties	617-629
		PVD	621
Dilatometric method	585	Retained austenite	633
EXAFS	597	Sintering	589
FeAl alloys	613, 625	Steel	633
Gradient coatings	621	Strain rate	613
Grain refinement	629	Tempering	585
High-speed steel	581, 589	Tensile strength	625
Infiltration	593	Tool gradient materials	617
Iron aluminides	625	Tool materials	581, 589, 621
Magnesium-Aluminum-Rare Earth Alloys	601	Transmission Electron Microscopy	605
Magnetite	597	Tungsten carbide	589
Materials	581-629	Uniaxial pressing	589
Mechanical properties	581, 629	X-ray diffraction	605
Metallic alloys	585, 601, 613, 625	ϵ carbide	585
Methodology of research, analysis and modelling	633
