

## Keywords index

|   |        |   |        |
|---|--------|---|--------|
| AFM   | 5      | Laser surface alloying                          | 53     |
| Age-hardening   | 37     | Loss factor                                     | 45     |
| Al-Ti-Fe alloy  | 29     | <b>Materials</b>                                | 5-33   |
| Aluminium   | 37     | Materials manufacturing and processing          | 49, 53 |
| Aluminium nitride   | 17     | Mechanical alloying                             | 29     |
| Amorphous materials   | 25, 33 | Mechanical properties                           | 37     |
| <b>Bioactivity</b>  | 5      | Metallic alloys                                 | 21, 29 |
| Body-sheet  | 49     | Methodology of research, analysis and modelling | 45     |
| <b>Casting</b>  | 49     | Mössbauer spectroscopy                          | 21     |
| Composite materials   | 45     | <b>Nanocrystalline alloys</b>                   | 25     |
| Composites  | 13, 17 | Nickel titanium                                 | 5      |
| Computational material science  | 45     | <b>Powder metallurgy</b>                        | 29     |
| Computer aided teaching   | 57     | Properties                                      | 37,41  |
| Corrosion resistance  | 5      | <b>Recycle</b>                                  | 49     |
| Crystallization   | 25     | <b>Sintering</b>                                | 9      |
| Crystallization of metallic glasses                                   | 33     | Soft magnetic properties                        | 25     |
| <b>Damping</b>  | 45     | Solidification                                  | 13     |
| Dynamic rigidity  | 45     | Solutioning                                     | 37     |
| <b>ECAP</b>   | 41     | Spark oxidation                                 | 5      |
| Education and research trends in materials<br>science and engineering | 57     | Steel AISI 316                                  | 41     |
| E-learning  | 57     | Structural relaxation                           | 25     |
| <b>Fatigue</b>  | 41     | Structure                                       | 13     |
| <b>High-speed steel</b>   | 9      | <b>Thermovision</b>                             | 13     |
| <b>In situ reaction</b>   | 17     | Titanium alloy                                  | 53     |
| Internal frictions  | 33     | Tool materials                                  | 9      |
| Iron aluminides   | 21     | Tungsten carbide                                | 9      |
| <b>Laminated plates</b>   | 45     | Twin roll caster                                | 49     |
| Laser gas nitriding   | 53     | <b>Uniaxial pressing</b>                        | 9      |
|   |        | <b>XPS</b>                                      | 5      |
|   |        | <b>XRD</b>                                      | 21     |
